GAGE-CHEK Wedge

PC software for transmitting data from digital readouts

The GAGE-CHEK Wedge is a PC software application for transmitting data from evaluation units and digital readouts. A connection via Ethernet (REST/HTTP) or RS-232 can be established between the PC and the GAGE-CHEK 2000 evaluation unit or any other digital readout that supports these interfaces. The software allows up to four devices to be connected at the same time.

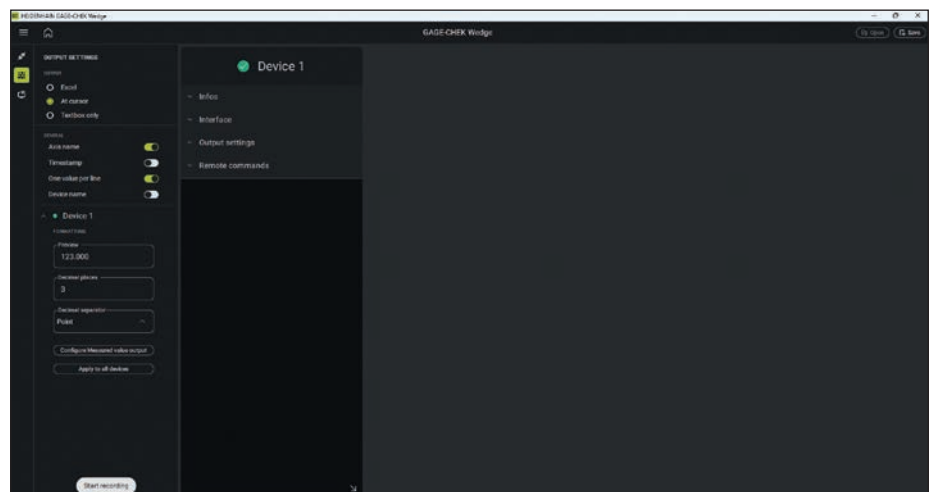

Efficient setup

The GAGE-CHEK Wedge features an intuitive connection wizard that guides users step by step through the setup process.

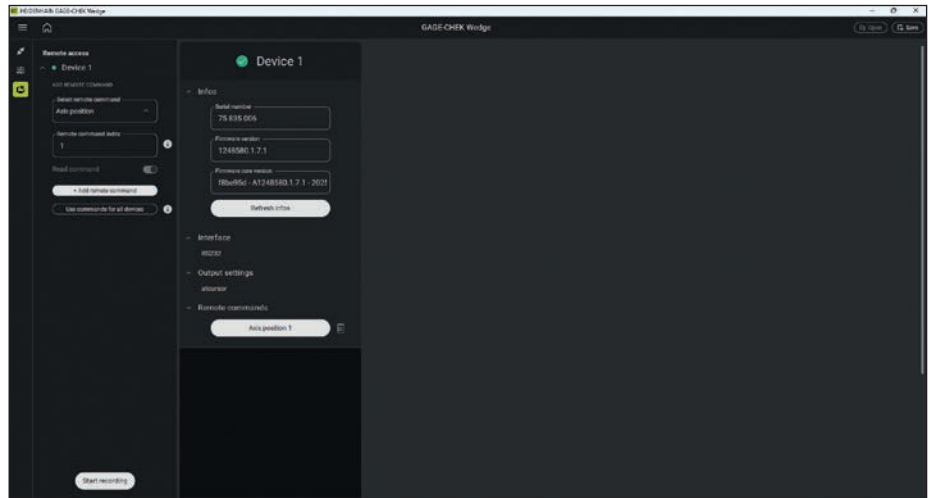

Versatile data processing

Regardless of the interface being used, data can be flexibly formatted and sent to the desired location (i.e., to cursor, Excel, or text field). Transmission to the cursor is ideal for writing data directly to other programs such as SAP or to a calibration chart. In Excel, data can then be used for downstream evaluations and statistical analyses. The text field of the software is available for communication tests.

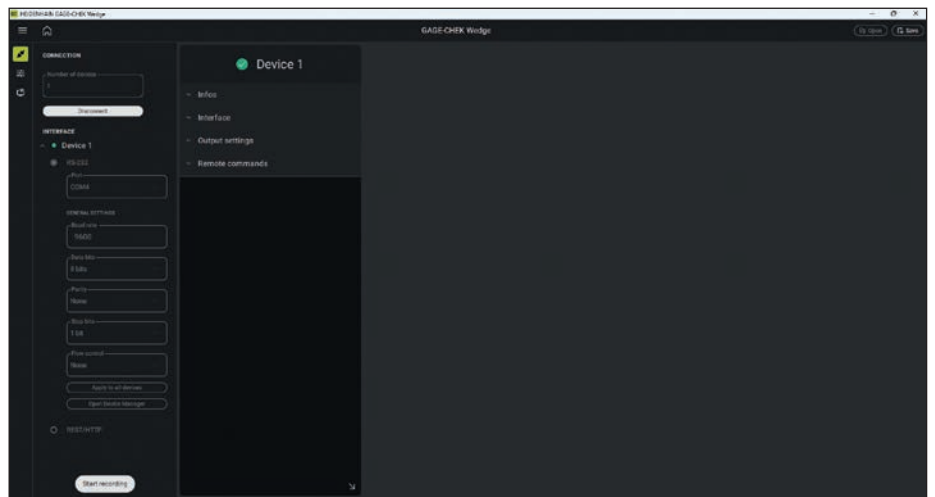

Control via remote commands

The connected readouts can be controlled via remote commands, allowing the PC to directly request the readout's current position or the status of reference marks.

Intuitive screen layout

Featuring context-sensitive information, the screen shows only those functions that are available in the given context. The self-explanatory operating elements enable intuitive user guidance.

System requirements	GAGE-CHEK Wedge
Operating system	Microsoft Windows 10 (version 1803 or higher), Microsoft Windows 11
Hard-disk space	> 250 MB
Screen resolution	> 1280 x 800 pixels
Microsoft Office	Excel 365 for data acceptance
License	Various license models are available for the software: <ul style="list-style-type: none"> • 1089221-01: Lifetime license • 1089221-51: Trial license (free for 2 months)

SAP, Microsoft, Windows, and Excel are registered trade marks of their respective owners.
